

Bogging Benz

This article is a true description of an AECS technical help desk problem and how it was solved.

Vehicle:

E320 Mercedes Benz 1996 3.2 ltr Petrol non turbo

Problem presented to the help desk

The Mercedes was presented to this workshop with a complaint that during firm acceleration it sometimes holds back. Releasing the throttle and depressing it again would often 'clear' the fault and makes the car accelerate firmly. No misfiring or lean/rich sounding engine, that would indicate a lack or over supply of fuel. The vehicle has no fault codes.

The throttle body is of the drive by wire type, and we really suspect that the throttle does not always open all the way. What should we measure first?

Measuring

Well if the throttle is suspect we should measure it, it is that simple!

The above ATS 5004D scope recording shows the throttle control motor and one of the throttle position sensors.

Check out the Training Calendar on back page.... If there is a course you'd like us to run but is not advertised, ring us so we can try to arrange one in your area next season.

There is a **SCOPE** to suit all needs.....

ATS 5004
 4 Ch scope.
 Best return
 on investment.

Diagnose
 quick and
 efficient!

HP3
 Portable
 scope

Quick hook up and
 very easy to use

Not every workshop is the same, and so the scope you choose needs to suit your working environment. We can help!

Call AECS to get the right scope, we have the expertise.

PH: 06 874 9077

ATS 5000 , 2 CH , Scope
 Our most popular scope in our wide range.

AECS Training coming up:

AED EMS1-2	20th & 21st April 22nd & 23rd April	Gisborne Hastings
DMS1-3 EMS1-4 AED	14th & 15th May 19th & 20th May 21st & 22nd May	Nelson Christchurch Christchurch

See our website for more details or enrol online

Taking enrolments now!

Did you know

AECS

promotes these brands?

Scan tools, emission testers and scopes (Austria)

Emission testers, Scan tools, Scopes, injector cleaner & tester (Italy)

Retractable and fixed workshop extraction equipment. (Italy)

High quality air-conditioning equipment. (Italy)

ATS automotive scopes, and ATIS data base manufactured by GMTO. (Holland)

Top of the line brake roller/ test lane equipment from VTEQ (From Spain)

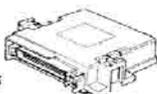

Scan tools. (China)

The equipment is supported with our well known, recognised training system and our technical support.

For annual calibration and regular service there is no need to send the equipment away, in most cases we can pick up and return the equipment the same day or perform the service on site.

Automotive Electronic Control Systems

From the recording, it is clear that the throttle opens wide even though the car holds back. It takes about 4 seconds before it is wide open but it does open.

We need to look for another reason why the engine holds back. Let us first look at the fuelling side. I want to know if the oxygen sensor reports a lean or a rich mixture during acceleration; it should be rich as a result of the programmed acceleration enrichment.

The following pattern was recorded and sent to the help desk.

Dual channel measurement of the throttle position sensor

Wrong!

This recording revealed that the mixture went lean during acceleration, now that is wrong! The bogging down is obviously the result of a lack of fuel going into the engine, not a lack of throttle opening.

We asked the diagnostician to check the fuel pressure, as at first the graph shows that the mixture goes rich during acceleration and only leans out further on.

The fuel pressure stayed good, so the next measurement we asked him to make was throttle position vs injector pulse width.

This recording was not saved and send to us, but during acceleration at first there was an increase of injection duration, and further down the pulse width stayed the same.

Air-mass

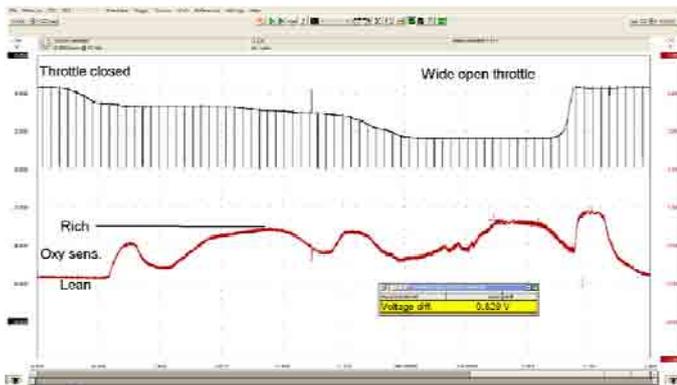

When a throttle opens, and the engine's speed increases, the air-mass increases. The increase in air-mass sensor voltage always results in an increase in injector pulse width.

The lack of injector pulse width indicated to us that the air-mass sensor's signal reading was very

likely too low at times, specifically during high air volume; remember the fault was not always there. Measuring the air-mass sensor showed a beautiful line with no errors on it. This does not mean anything, as it is the outcome of the oxygen sensor signal that really counts!

Fixed

A new air-mass sensor was fitted, which produced the following signals.

Dual channel recording with the ATS 5004D 4 Channel scope while accelerating

In the recording it can be seen that even though the accelerator is depressed full, the throttle opens 'gently' and staged and most of all the mixture goes to rich during acceleration, just like what you would expect.

The car is driving beautiful and has its full performance back.

Conclusion

Complex? Nah... I don't think so! Just realise that modern automotive technology requires skill. In our industry, there is virtually no room for low skilled people anymore.

AECS has been delivering nationwide training for ten years now, up skilling the top level of the automotive industry.

We are also constantly developing new seminars to keep the great people who work in the garages of NZ at pace (and ahead) of current automotive technology.

Try to stay ahead as you will get a visit from your customer when something goes wrong with their car.

Invest in your skills and in the best equipment available with great back up from **AECS**. It is these key elements that made this Mercedes job quick and profitable.

Looking for a quick hook up tool?

New!

Intro special **\$1,250** plus gst

Just connect to your USB port and

you make even the fastest signal visible, all for the price of a Multi-meter! Check the awesome ability on our website. Can also be used as an extra channel for the ATS 5000 and ATS 5004 scope!

www.aecs.net

- **HP3** single channel scope
- 0.2V to 800V direct differential input(!)
- Up to 100MS/sec
- 1.2M point buffer powered by USB port.

Did you know that.....

AECS has a full 2010 model range of top quality Italian Air-conditioning service equipment available. Our range includes, Truck service stations, leak search, diagnostics and flushing equipment.

This is backed up with our full after sales service. Annual calibration / service work can be done at your door without the airconditioning unit having to be shipped about the country.

How many companies offer that?

\$4,990 + gst

Launch X-431 GX3

Features:

- ▶ Touch Screen PDA
- ▶ Inbuilt printer
- ▶ Able to be used on 57 car brands
- ▶ Very simple to operate
- ▶ Many protocols are almost identical to factory software
- ▶ 1 year free updates and 12 month warranty
- ▶ Strong carry case for all connectors and tool
- ▶ **AECS** technical support.

X431 GX3 scan tool is the new look scantool developed by Launch. It's a perfect complete unit, it out performs all other diagnostic tools you have seen so far.

HURRY THIS PRICE WON'T LAST FOR LONG!

Parallel import.
New shipment arriving soon!
